

“NEW” Electronic Flea Trap

FEATURES:

- Using blue LED light to attract and trap fleas without the use of chemicals or pesticides.
- Fleas get trapped on the metallic adhesive sheet (there are no pesticide chemicals on the sheet)
- Cordless - battery operated, eliminating the need for a power cord means this unit is truly portable
- Switchable LED lamp - constant light or flashing mode

INSTRUCTIONS FOR USE:

1. Install the two “AA” batteries in the unit
2. Carefully raise the plastic grill by pulling up on the tab in the front of the unit
3. Open the adhesive sheet package and remove the protective cover and place the adhesive sheet into the unit under the plastic grill. Lower the plastic grill over the adhesive sheet.
4. Place the unit in an area where fleas may exist. (room corners, along a wall, under furniture (beds, sofas, tables), or near the edge of a carpet. The unit will attract fleas from a distance. For best results uses the flea trap in a darkened room (e.g. turn the unit on overnight in a darkened room).
5. Turn the unit on - Move the switch to the left for constant light mode or to the right for flashing mode. Note: Some people are sensitive to flashing lights, so in this case we recommend using the constant light mode.
6. Flashing mode will prolong the battery life of the unit
7. Replace the adhesive sheet every 3-4 weeks or when the sheet becomes full of fleas.

Flea Trap Kit includes:

- Electronic Flea Trap unit
- Two AA batteries
- One adhesive sheet (additional sheets may be purchased separately)
